

# GE Oil & Gas PII Pipeline Solutions

## Technology

For more than three decades, GE's PII Pipeline Solutions business has been a pioneer in inspection and integrity technologies. Our investments have produced the world's largest fleet of industry-leading tools including UltraScan™ WM, CD and Duo; EmatScan™; MagneScan™ and SmartScan™. Our PipeView™ suite of software provides a means for more effective integrity management, and ThreatScan™ provides precise real-time monitoring of third party damage.

## Business

We take a long-term view and approach each customer relationship as a mutual opportunity. This approach to our Contractual Service Agreements, for example, provides guaranteed performance levels at a predictable cost – even when unplanned situations arise. Whether for a discrete service or comprehensive package, over a short term or long term, our goal is to provide lasting product and service quality in a way that makes the most sense for you.

## Compliance

GE has inspected more miles of pipeline, under more diverse operating conditions and product types than any other pipeline inspection company. This extensive experience, combined with our engineering depth, is regularly used as a resource for industry research, standards committees and regulatory bodies around the world. Our customers rely on us for best-practice technology, advice and services to maintain their productivity in the face of changing regulations.

## Expertise

World-class integrity management requires world-class resources and capabilities. Continuous training and development of our personnel means that we attract and retain the best. And, simply put, it takes the best people to deliver the best technologies and service.

## Service

Whether for in-line inspection, integrity engineering or turnkey field services, we provide a complete solution with the equipment, technologies and skilled professionals to meet all your requirements no matter what the challenge. We have the global infrastructure and local presence to deliver responsive, customer-focused service from pre-inspection planning to remediation and on-going integrity management.

## Partnership

With the right team, anything can be accomplished. GE works with other industry leaders to develop breakthrough technologies, equipment, software and process innovations. Whether we are working with GE's Global Research Centers or industry associations such as PRCI, universities, commercial partners or customers, many of our solutions rely on close collaboration to establish new technologies that are right from the start.

# Leadership – all down the line

Being a leader isn't just about having the latest technologies. It's about having the people, experience and insight to continually develop better solutions. This philosophy is built into everything GE's PII Pipeline Solutions business has done for the past 30 years. As part of the global GE organization, we have immediate and unparalleled access to innovations from the world's most technologically progressive industries. Truly global ideas merge to overcome the greatest challenges for our customers in the oil and gas industry. For better tools and smarter decisions – all down the line.

## Safety

At GE, safety is a way of life – and our foremost commitment whether in field operations or engineering services and consultancy. Our facilities and equipment lead the industry in ATEX and API certification, and all our personnel regularly undergo rigorous training to ensure that we minimize risk every step of the way.
