2 in 1

inspection capability

Always first in-line

UltraScan™ Duo is the industry's first in-line inspection tool capable of delivering such an advantage – saving valuable time and dramatically reducing inspection costs. It is also the first tool to use Phased Array Technology (developed in the healthcare industry for critical brain and spinal scans), delivering greater data resolution, accuracy and providing full coverage of pipe circumference. Duo's unique 2-in-1 capability allows for the seamless correlation of cracking and wall measurement data needed for advanced modeling of Stress Corrosion Cracking.

It's another piece of GE technology at the forefront – which is right where you need it.
